S13 Table. Reproduction of the published fits by the refits, and its effect on the counts.

Osgood-Zimmerman & Raredon

Of the 790 genes refitted with the published model specification, 778 reproduce the stored per-bin posterior medians and 95% interval widths of the published fits within Monte Carlo error. A gene is flagged when, over 2,000 fixed bins, the median difference between the refit and published posterior medians exceeds 0.04 on the log scale, or the median ratio of 95% interval widths (log scale) falls outside 0.9 to 1.1; differences between two independent sets of draws from one refit stayed within 0.02 and 0.96 to 1.04 for seven genes checked. The full per-gene check is in S14 File (`check2.csv`).

(A) Flagged genes.

Gene	Median log difference	Width ratio
Alox5	0.113	0.89
Artn	0.044	0.61
Cmklr1	0.066	0.99
Cspg4	-0.068	0.99
Fgl1	-0.045	1.01
Il1r2	0.041	1.00
Ly96	-0.052	1.05
Mchr1	0.061	0.89
Nxph3	0.005	1.16
Ocln	-0.040	1.00
Pmch	-0.006	0.84
Tlr1	-0.187	2.27

(B) The 17 ligand-receptor pairs involving a flagged gene. ALOX5AP-ALOX5, ARTN-GFRA1, ARTN-RET, BGN-LY96, BGN-TLR1, C1QA-CSPG4, CGN-OCLN, FGL1-EGFR, HSP90B1-TLR1, IL1A-IL1R2, IL1RN-IL1R2, NXPH3-NRXN1, NXPH3-NRXN2, NXPH3-NRXN3, PMCH-MCHR1, RARRES2-CMKLR1, VCAN-TLR1.

(C) Counts with and without the flagged pairs. Same-field region comparisons (1,477 pairs × 13 comparisons) and cross-field comparisons (pairs of fields sharing a ligand or receptor, × 10 regions). LD: looks different (plug-in ratio $\geq T$); LD-NC: looks different, not credible; LA-C: looks alike, credible.

T	Pairs	n	LD	LD-NC	LA-C	Cross LD	Cross LD-NC
1.25	all pairs	19,201	11,527	3,603	991	69,723	27,167
1.25	flagged pairs excluded	18,980	11,473	3,572	981	69,191	26,913
1.5	all pairs	19,201	7,719	1,536	2,732	47,652	13,713
1.5	flagged pairs excluded	18,980	7,690	1,525	2,717	47,208	13,530
2	all pairs	19,201	4,412	448	4,951	27,139	4,973
2	flagged pairs excluded	18,980	4,397	443	4,928	26,834	4,871

(D) Plug-in reading from the refit. For the 221 region comparisons of the flagged pairs, *looks different* at $T = 1.25$ was recomputed from the refit's own posterior medians instead of the published fit: 214 of 221 calls agree; the number that look different but are not credible is 29 with the refit plug-in and 31 with the published one. Per-comparison values are in S14 File (`flagged-refit-plugin.csv`).
